

Natural formula of water

«Karpatska dolyna»

Water components	Value for the human organism
Sodium, Na	Maintenance of water-salt and acid-basic exchanges; adjusting of cellular exchange of different metabolisms. In enhanceable concentrations strengthens laxation, stimulates cholepoietic and bile-excreting functions.
Chlorides, Cl	Maintenance of acid-basic and water-salt exchanges: participate in the processes of intake of food.
Potassium, K	Jointly with Na plays an important role of maintenance of water-salt exchange; As catalyst in the exchange of proteins and carbohydrates; stimulates the secret function of glands of digestive system.
Magnesium, Mg	Active role in the exchange of fats and carbohydrates; adjusting of neuromuscular conductivity; antystress microelement, immunostimulant; reduces anti-inflammatory action.
Calcium, Ca	Vitally needed for a normal growth and development of all tissues, including bone.
Fluorides, F	Maintenance of acid-basic exchange.
Iodine, I	Multifaceted influence on all types of metabolism, development and growth of an organism.
Bicarbonates, HCO	Maintenance of acid-basic exchange.
Mineralization	Maintenance of water-salt and acid-basic exchanges; Multifaceted influence on all types of metabolism.

Natural still drinking water
0,5 L and 0,33L

Natural slightly-gas-
cut drinking water
0,5 L and 0,33 L

Natural strongly
sparkling drinking water
0,5 L

Ideally benefits for daily consumption.
Natural still drinking water
6 L
